

NOW ON ITS THIRD YEAR:
THE PROGRAM ON MASSIVE VACCINATION AGAINST RABIES
OF ALL DOGS IN ALL BARANGAYS IN ALL MUNICIPALITIES/CITIES
IN THE PROVINCE OF ISABELA

Rabies is a highly fatal viral disease predominantly affecting warm-blooded animals such as dogs and cats including man. It has already claimed the lives of many Isabeleños in the past years. The disease affects the nervous system with clinical signs of mania and paralysis. It is common in dogs and usually transmitted through the bites.

To control the disease, the Provincial Government of Isabela, through the Provincial Veterinary Office, had teamed-up with the Department of Agriculture (DA) and Municipal/City Local Government Units (MLGUs) and launched the Four-Year Program on Massive Vaccination of Dogs Against Rabies. The program aims to vaccinate ALL dogs in ALL Barangays in ALL Municipalities/Cities of the province.

During the first year of the program in 2015, the total number of dogs vaccinated was 152,549 covering 930 barangays.

For 2016, we were able to vaccinate 144,153 dogs in 865 barangays.

For this CY 2017 – the third year of its implementation – as of October 2017, there are about 162,810 dogs vaccinated in 902 barangays– this is so far the highest rabies vaccination accomplishment compared to the same period in previous years.
