

PVET OFFICE REINFORCES THE FIGHT AGAINST RABIES

Rabies is a highly fatal viral disease predominantly affecting warm-blooded animals such as dogs and cats including man. It has already claimed the lives of many Isabelenos in the past years. The disease affects the nervous system with clinical signs of mania and paralysis. It is common in dogs and usually transmitted through the bites.

To control the disease, the Provincial Veterinary Office teamed with the Department of Agriculture (DA) and Municipal Local Government Units (MLGUs) to vaccinate dogs in the priority areas. For the first and second quarter of 2014, there were more than 24,000 dogs vaccinated – this is so far the highest rabies vaccination accomplishment compared to the same period in previous years.
